### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 108-110, 114-118, 126, 127, 129, 130, 133-137, and 143 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsen et al. Matsen teaches the claimed invention including a shape imparting shell of rigid material comprised of first and second shell portions at 46/48, force transmitting material at 20/22, induction coils at 36, and a framework of aluminum strongbacks (not numbered but see column 4, lines 63-66). The force transmitting material, as well as the shell portions, are made of “fused silica ceramic” (see column 5, lines 16-20). The shell portions are considered to have an axial profile component as it applies to claim 118.

2. Claims 111-113, 119-125, 128, 131, 132, and 138-142 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
